IV. APPENDIX	77

This report presents tabulations of merchandise exports by industry from Utah, the Western States, and the United States. The source of the export data is the U.S. Census Bureau. To provide a technical context for Utah's export data, an extended technical discussion of the factors influencing U.S. trade is presented. The technical discussion is followed by a discussion of the merchandise export data. Readers interested in only the data may wish to skip the technical discussion.

Technical Discussion: An Overview of U.S. International transactions

Utah's merchandise exports occur in the larger context of the U.S. role in the global economy. The first point to note about international trade is that it is described by two sets of accounts: the current account, detailing exports and imports of goods and services and income flows; and the capital account, detailing U.S. investment abroad and foreign investment in the U.S. By definition, the current account and the capital account balance to zero. So if the current account is in deficit, or the U.S. is importing more goods and services than it exports, as was the case during the 1990s, then the capital account is in surplus in a magnitude equal to the current account deficit, or foreign investment in the U.S. exceeds U.S. investment overseas by an amount equal to the U.S. trade deficit. A trade deficit (surplus) always goes hand in hand with an equal size capital account surplus (deficit).

The accounts that measure trade, as well as all the features of the U.S. economy, are called the National Income and Product Accounts (NIPA), and are maintained by the U.S. Bureau of

Economic Analysis (BEA). The NIPA began in 1929; no reliable comprehensive and integrated set of measures of the U.S. economy are available prior to 1929.

Global trade has blossomed since the victors in World War II established a liberalized economic order that continues to govern the international economy today. Accordingly, the importance of trade, exports plus imports, in the U.S. economy has almost tripled since 1929, increasing from an average 7.7% of GDP during the 1930s to an average of 23.7% during the 1990s. Trade generally remained less than 10% of GDP until the 1970s; but during the decade of the 1970s the relative importance of trade doubled to just over 20%, before falling back during the recession of the early 1980s. Since 1990, trade has remained above 20% of GDP, peaking at 26% during 2000, and falling back as the recession took hold during 2001.

While the U.S. currently imports more than it exports, and the trade deficit as a percent of GDP grew during the 1990s, exports as a percent of GDP also grew quite strongly during the 1990s, increasing from a cyclical low of 7.2% in 1987 to a cyclical high of 11.6% in 1997. From the end of World War II until 1970, the U.S. ran a trade surplus in the range of 1% of GDP. Since 1976, however, the U.S. has never run a trade surplus, and the smallest deficit as a percent of GDP was -0.3% in 1991.

A common interpretation of the persistent trade deficit is that the U.S. has become uncompetitive in international markets; or that foreigners discriminate against U.S. exports. Because the

U.S. is the largest exporter on earth, exporting more than \$1 trillion of goods and services during 2000, which was \$400 billion, or 67%, more than 2nd place Germany, neither of these assertions is confirmed by the record.

Trade deficits must be financed in the currency of the country supplying the imported goods and services. Just as Americans require dollars for the goods and services they supply, Germans require euros, British require pounds, Japanese require yen, Mexicans require pesos, and so on. If the Germans are selling more to the Americans than they are buying, or the Americans are running a trade deficit with the Germans, then the Americans must borrow euros to buy the German goods and services. The bottom line on these transactions is that capital, goods, and services flow out of Germany and into America.

Since the U.S. trade deficits of the 1990s are also capital account surpluses, another interpretation of these deficits is that foreign demand for investments in the U.S. outpaced U.S. demand to invest overseas. In other words, foreigners want to lend to Americans more than Americans want to lend to foreigners; or the investment opportunities to foreigners in America are better than the opportunities in their home countries. Given political and economic instability across much of the globe, the U.S. will remain a desirable place to invest, so the capital account should remain in surplus and the trade deficits should persist, though at a smaller level relative to GDP.

The only real concern with trade deficits for the U.S. is the burden of repaying the mounting international debt. Depending on the measure, the U.S. became a net debtor nation sometime between 1985 and 1990. BEA uses two measures of international investment: current cost and market value. Current cost is based on the cost of the physical assets associated with foreign investment. Market value is based on owners' equity, as reflected in stock price indexes. In addition to BEA, the Federal Reserve also estimates international investment in the Flow of Funds Accounts (FFA) it maintains. Using the FFA estimates of international investment, the U.S. became a net debtor in 1985; in 1986 using BEA current cost, and in 1989 using BEA market value.

While the Federal Reserve uses the BEA's measures of the U.S. international investment position, and specifically does not use the FFA for this purpose, FFA estimates of international investment go back to 1945, while BEA current cost only goes to 1976 and BEA market value goes to 1982. Despite the fact that the FFA do not provide a preferred measure of international investment, they are still useful as a means to gain insight for the three decades from 1945 to 1976. Further, the three measures move together, suggesting they are equally useful in terms of understanding the dynamics of the U.S. position.

Using the FFA, apparently the U.S. was last a net debtor at the end of World War II, albeit with a small debt of just -0.2% of GDP. The Marshall Plan and the reconstruction of Western Europe and Japan rapidly increased U.S. investment overseas. By the close of the 1940s, the U.S.

was a net creditor, in a range above 5% of GDP, which was its investment position until the Vietnam War and Arab oil embargo.

From a low of 1.2% of GDP in 1972, by the 1980s, the U.S. net investment position returned to its previous post-War norm, a range above 5%. Interestingly, the BEA's measure, which includes U.S. government gold stocks as an international asset, shows a sharp increase from 1978 to 1980, a period when the price of gold tripled, to over \$800 an ounce. The increase in gold amounted to an increase of \$100 billion in U.S. international assets, which was almost 4% of GDP at the time. Since the FFA measure does not include gold, no increase in the U.S. position from 1978 to 1980 appears; and as gold declined from \$800 an ounce to a range below \$300, the BEA measure declines while the FFA does not.

Based on an integrated analysis of the FFA and BEA measures of the U.S. international investment position, it appears the natural tendency of the U.S. economy was to maintain a net creditor position in a range above 5% of GDP until the mid-1980s. A number of events, beginning with the oil shocks of the 1970s, and including the massive federal deficits and radically appreciating dollar of the 1980s disrupted this tendency. Since the 1990s, the U.S. has been a net debtor in a range below -5% of GDP. Since 1999, the net investment position has deteriorated from -10% of GDP to -20%.

The trade deficit and investment position are not really important by themselves, what matters is foreign claims on U.S. income. So it is the

income payments we must make on the debt we owe, not the debt per se that is the issue. Trade deficits increase the debt, and hence increase foreign claims on U.S. income. But the U.S. receives income from its overseas investment as well as making payments on foreign investment in this country. In every year since 1929, except 1998, U.S. net income on investment, that is income receipts from overseas less income payments to foreign investors, was significantly positive, generally in the range of 0.5% of GDP. Recently, net income has trended down and for the first half of 2002 has been negative.

The most important feature of the trade deficits and international investment is that U.S. investment overseas is much more profitable than foreign investment in the U.S. During 1991, for example, foreigners actually lost \$2.3 billion dollars on their direct investment in the U.S., while Americans made \$58.7 billion on their direct investment overseas. It is not possible to know which specific investments performed badly, but it appears the U.S. recession of 1991 created a negative return on direct investment for foreigners. Since 1990, the U.S. return on its investment overseas has been between 20% and 40% higher than the foreign return. During 2001, the U.S. return was 5.1%, which was 41% higher than the foreign return of 3.6%.

The most common reason advanced for why foreigners are willing to accept relatively low returns on their U.S. investments is that the risk of political disruptions, such as government sponsored asset seizures, is essentially

zero. The U.S. political system is very stable and the rule of law is solidly entrenched. U.S. investment overseas, in contrast, often occurs in politically volatile regions such as the Middle East and Latin America. Because of this volatility, the absence of solid legal systems, the high level of corruption, and other shortcomings, Americans require a higher return on their overseas investments.

Its higher return meant that despite becoming a net debtor in the 1980s, and the dramatic deterioration of its international investment position during the 1990s, U.S. net investment income remained positive. Although the U.S. was a debtor, it still earned more on its overseas investments than it paid to foreign investors. In this situation, adding more debt by running trade deficits doesn't signal economic trouble. Now that net international investment income appears to have turned negative, however, running trade deficits is more likely to create difficulties. The degree of difficulty will be determined by the productivity of foreign investment in the U.S. If the investment improves productivity, making the income payments should not cause problems.

As the global growth picks up steam over the next few years, trade and U.S. exports will pick up. Utah's merchandise exports will increase as well, perhaps to a level above \$4 billion. How rapidly U.S., and Utah exports increase depends on the interplay of foreign demand for low risk assets in the U.S. and the increasing spread between yields on U.S. assets relative to yields elsewhere. Assuming the performance of

the global economy relative to the U.S. improves in the next few years, foreign investment in the U.S. and the consequent demand for dollars will drop off, the dollar will depreciate, U.S. goods will become less costly, exports will surge, and the U.S. trade deficit will fall. When this time comes, Utah's merchandise exports will increase.

Utah's Merchandise Exports in Detail

Since 1997, Western Europe has been Utah's largest export market, followed by East Asia. In 2001, Utah exported \$1.5 billion of merchandise to Western Europe, which was 72% more than the \$880 million sold to East Asia. Exports to East Asia peaked at over \$1.0 billion during 1997, fell to less than \$750 million during 1999, and have since modestly recovered to \$880 million during 2001. Canada is Utah's third largest market, with export purchases of almost \$600 million during 2001. Combined, Europe, East Asia, and Canada purchase about 90% of Utah's exports, though this share has been declining, falling from 92% in 1997 to 88% in 2001. Mexico and Latin America purchased 7% of Utah's exports during 2001.

Since 1997, Switzerland, Canada, the United Kingdom, and Japan have been the top four national markets for Utah's exports.

Switzerland has been in the top four countries purchasing Utah exports since 1998. In 2001, Switzerland was the largest purchaser of Utah's exports; purchasing almost \$700 million of merchandise, of which almost \$680 million, or 97%, were primary metals.

Canada was the second largest export market for Utah in 2001, and has been the first or second since 1998. Utah exports to Canada increased from a range of \$500 million in 1997 and 1998, to a range of \$600 million since 1999. Transportation equipment (airbags from Thiokol's plant), accounts for 25% to 30% of Canada's purchases, dominating Utah's sales there. At \$55 million during 2001, computer and electronic sales to Canada were the second largest products, with a 10% share of total exports. In addition to transportation equipment and computers, Canada makes significant purchases of metals, machinery, and chemicals from Utah.

The United Kingdom was the third largest export market for Utah in 2001, purchasing \$421.3 million of merchandise. In 1997 and 1998, the U.K. was the largest market. Metals have consistently been the top product sold to the U.K., though the share of metals in total exports has fallen from almost 90% in 1997, to 50% or 60% recently. At around \$30 million for each product, sales of computers and electronics, electrical equipment, and transportation equipment combined, accounted for 15% of total exports during 2001.

Japan was the fourth largest export market for Utah in 2001, purchasing \$396.4 million of merchandise. Japan was Utah's second largest market in 1997, purchasing over \$500 million of merchandise, including over \$100 million of airbags and coal. Since 1998, however, Japan has been the third or fourth largest market, purchasing about \$400 million of merchandise. Since 1997, Japan's largest purchases from

Utah have been airbags, coal, chemicals, food, and computers.

Since 1997, the Netherlands, Korea, Mexico, Germany, and the Philippines have been among the top ten markets for Utah's exports. Airbags and computers are typically the main products sold to each of these countries. The Netherlands also purchases significant amounts of minerals. Mexico buys around \$10 million of food and \$10 million of chemicals. The other countries tend not to buy other products from Utah.

Merchandise Exports from Western States

California is consistently among the largest exporting states in the country, accounting for around 15% of U.S. exports. During 2001, California exported \$110 billion of merchandise, down 8% from \$120 billion in 2000. Intel semi-conductors and other types of computer and electronic equipment are California's top selling product, at about half of all merchandise exports. California exports about twice as much to East Asia, its largest market, as to Western Europe, the second largest market. Prior to the East Asian crisis, Japan was California's largest national market, and computers and electronics were California's top selling product to Japan. Since 1999, Mexico has been California's largest market, and it too buys mostly computers and electronics.

Among western states, Washington is the second largest exporter after California. During 2001, Washington exported \$35 billion of merchandise, up 9% from \$32 billion in 2000. Boeing aircraft are Washington's top selling

product, at about half of all merchandise exports. East Asia and Western Europe are Washington's largest export markets. In 2001, East Asia purchased \$15 billion of merchandise, and Western Europe purchased \$9 billion. In 2000, however, the situation was reversed. Western Europe purchased \$12.5 billion and East Asia purchased \$11.8 billion. In every year since 1997, Japan has been Washington's largest national market, usually spending several billion dollars on Boeing aircraft, but also spending large amounts on a variety of other products including computers, timber, food, and chemicals.

Arizona is the third largest exporter in the West, with merchandise exports of \$12.5 billion in 2001, down almost 14% from \$14.3 billion in 2000. Intel semi-conductors and other types of computer and electronic equipment accounted for about half of Arizona's exports during 2001, down from about 70% during 1997. The decline in semi-conductors is reflected in Arizona's total exports, which declined from \$13.8 billion in 1997 to \$12.9 billion in 2001. Mexico, East Asia, and Western Europe are Arizona's largest export markets. After the East Asian contraction, Mexico replaced East Asia as Arizona's largest export market in 1999. Transportation equipment accounted for about 25% of Arizona's exports, followed by machinery, metals, and plastics.

After California, Washington, and Arizona, the largest exporting states in the Western U.S. are Oregon, Colorado, Utah, Idaho, Nevada, and Wyoming. Exports to East Asia from Oregon are two to three times exports to its next largest markets, Western Europe and Canada. Semi-conductors are Oregon's top product, at about 50%

of exports in 2001. East Asia and Western Europe are Colorado's largest markets, and, like Oregon, semi-conductors and other computing devices are the primary export, at about 50%. East Asia is Idaho's largest market and memory chips from Micron and computing devices from Hewlett Packard account for more than 50% of total exports. If services were included in the state export data, international travel to Nevada's gaming industry would be one of the state's largest exports. Excluding services, computers and electronics and transportation equipment are Nevada's top products and Canada is Nevada's primary market. East Asia is Wyoming's primary market, and chemicals account for about 75% of total exports.

Conclusion

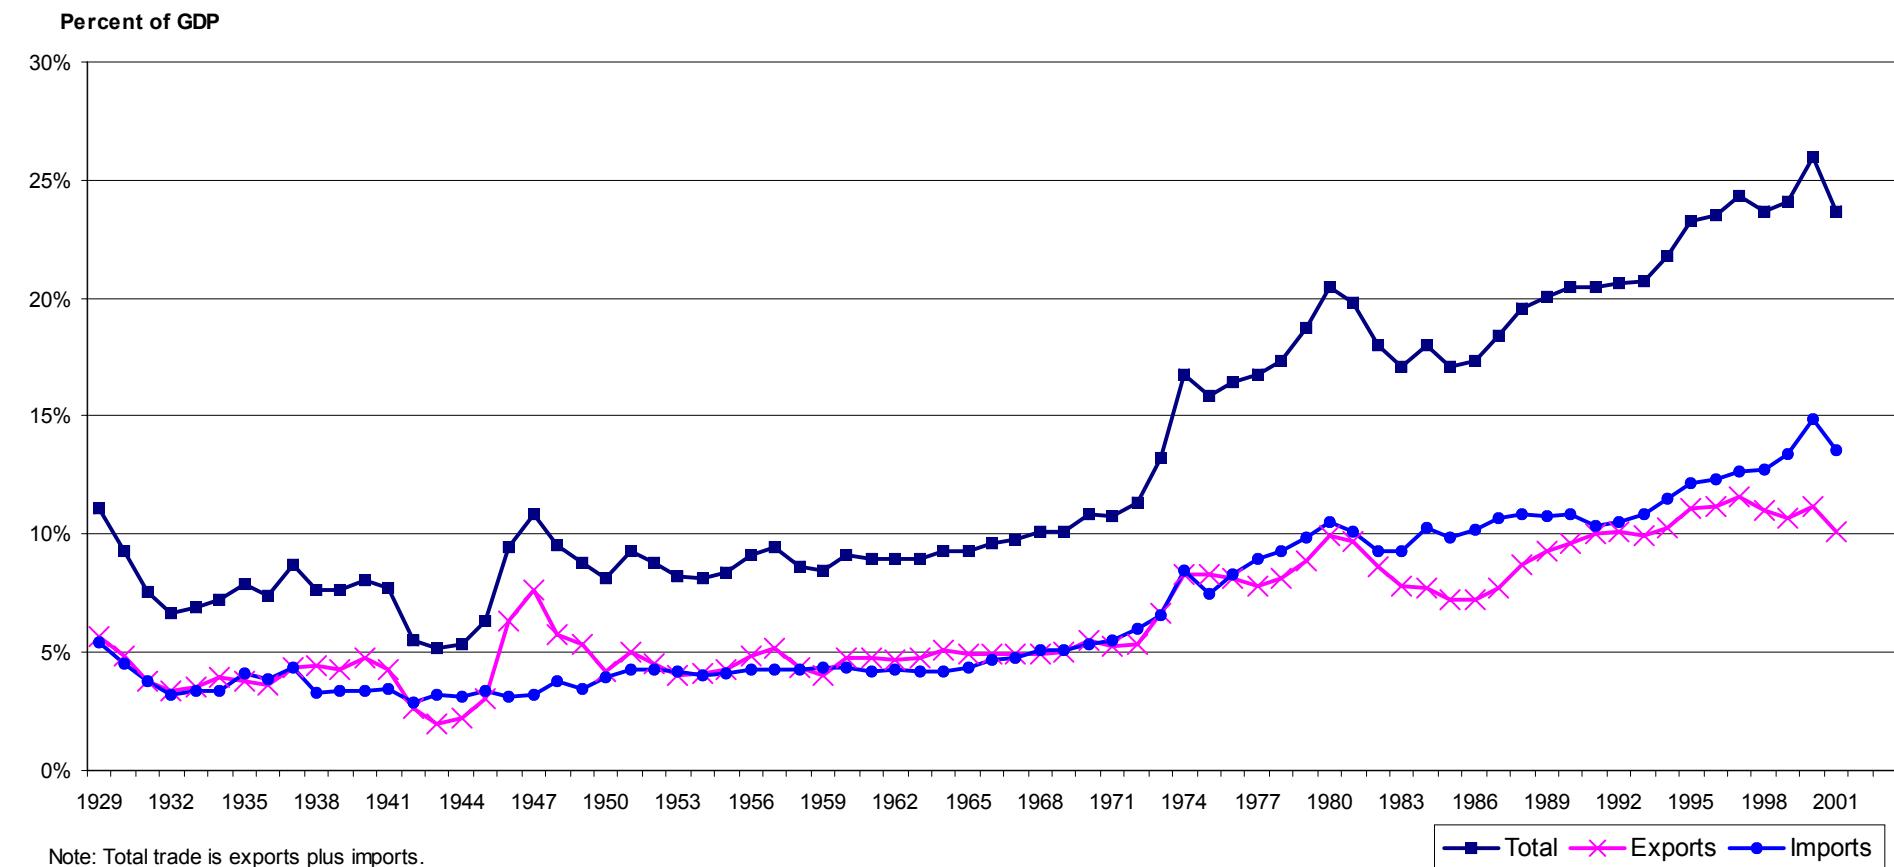

International trade and investment is a driving force in the U.S. economy and in the economies of the states. Utah and the West are no exception. While the U.S. is far and away the largest exporter on earth, it still runs large trade deficits. As these deficits cumulated during the 1990s, the international investment position of the U.S. deteriorated to the point that during 2002 income payments to foreigners will exceed income receipts. This situation is unparalleled in the last 75 years. These changes should set the stage for a decline in foreign demand for U.S. assets with a resulting increase in exports over the next five years or so. In the short term, economic weakness overseas may limit U.S. exports. While Utah's exports rose in 2001, the extent to which this increase can continue is limited in the short term. As the decade of 2000 closes, however, Utah's exports should grow strongly.

APPENDIX

DEFINITION OF GLOBAL REGIONS THAT TRADE WITH THE UNITED STATES

Because of the large volume of trade between the United States and Canada and the United States and Mexico, Canada and Mexico are stand alone regions. Other countries are grouped into regions by geographic location.

Countries in East Asia

Cambodia, China, North Korea, French Southern Territories, Hong Kong, Indonesia, Japan, Korea, Laos, Macau, Malaysia, Mongolia, Myanmar, Papua New Guinea, Philippines, Singapore, Taiwan, Thailand, Viet Nam

Countries in West Asia

Afghanistan, Bahrain, Bangladesh, Bhutan, British Indian Ocean Territory, Brunei, Darussalam, Cocos (Keeling) Island, Gaza, India, Iran, Iraq, Israel, Jordan, Kazakhstan, Kuwait, Kyrgyzstan, Lebanon, Nepal, Oman, Pakistan, Qatar, Sri Lanka, Syria, Tajikistan, Turkmenistan, United Arab Emirates, Uzbekistan, West Bank, Yemen

Countries in Africa

Algeria, Angola, Benin, Botswana, Burkina Faso, Burundi, Cameroon, Cape Verde, Central African Republic, Chad, Comoros, Congo, Cote d'Ivoire, Democratic Republic of The Congo, Djibouti, Egypt, Equatorial Guinea, Eritrea, Ethiopia, French Guiana, Gabon, Ghana, Guinea, Guinea-Bissau, Kenya, Lesotho, Liberia, Madagascar, Malawi, Maldives, Mali, Mauritania, Mauritius, Morocco, Mozambique, Namibia, Niger, Nigeria, Rwanda, Senegal, Sierra Leone, Somalia, South Africa, Sudan, Swaziland, Tanzania, Togo, Tunisia, Uganda, Zambia, Zimbabwe

Countries in Western Europe

Andorra, Austria, Belgium, Denmark, Faroe Islands, Finland, France, Germany, Gibraltar, Greece, Greenland, Iceland, Ireland, Italy, Liechtenstein, Luxembourg, Malta, Monaco, Netherlands, Norway, Portugal, Spain, Svalbard & Jan Mayen, Sweden, Switzerland, Turkey, United Kingdom, Vatican

Countries in Eastern Europe

Albania, Armenia, Azerbaijan, Belarus, Bosnia & Herzegovina, Bulgaria, Croatia, Cyprus, Czech Republic, Estonia, Macedonia, Georgia, Hungary, Latvia, Lithuania, Moldova, Poland, Romania, Russia, Slovakia, Slovenia, Yugoslavia

Countries in Australia-Pacific

Australia, Cook Islands, Federated States of Micronesia, Fiji, French Polynesia, Heard Island & McDonald Islands, Kiribati, Marshall Islands, Nauru, New Caledonia, New Zealand, Niue, Norfolk Island, Palau, Pitcairn, Reunion, Samoa, Seychelles, Solomon Islands, Tokelau, Tonga, Tuvalu, Vanuatu, Wallis & Futuna

Countries in Latin America

Anguilla, Antigua & Barbuda, Argentina, Aruba, Bahamas, Barbados, Belize, Bermuda, Bolivia, Brazil, British Virgin Islands, Cayman Islands, Chile, Christmas Island, Colombia, Costa Rica, Cuba, Dominica, Dominican Republic, Ecuador, El Salvador, Grenada, Guadeloupe, Guatemala, Guyana, Haiti, Honduras, Jamaica, Martinique, Montserrat
